The OpenNMS Core Software provides the ability to monitor and manage the performance of a network and the network infrastructure around it. OpenNMS is an open source solution that can leverage existing network devices. For a comprehensive monitoring and management solution it is designed to allow a variety of deployments ranging from small deployments to enterprise scale. Network Client Server Monitor was designed to be an easy-to-use client-server network monitoring software. It can work on multiple platforms from Mac OS, to Windows, to Linux to Solaris. Data included in the packages can be downloaded from the server, or be displayed in graph view, or as a table. Network Client Server Monitor adds a powerful clustering feature to network monitoring software, enabling you to build large-scale networks monitor without any complexity. SGMM is a general purpose mission critical system monitoring software for enterprise IT engineers. SGMM provides many sophisticated features and is available in professional and free versions for both Linux and Windows operating systems. It supports monitoring over TCP/IP or UDP. Each monitoring channel is run as a separate process. It supports multiple data sources and storage. It also provides features to display graphs and statistics of the monitored system. SGMM can be used to monitor both servers and workstations. Data can be either stored on the disk of each machine, or be pushed to remote servers via FTP, TFTP, HTTP, and SNMP. The PushTriggers Server allows you to monitor your computer from anywhere you want using any Internet browser. It gives you the ability to monitor the network, monitor any application, create alarms, and snoop on network traffic. Squid Monitor is a web-based application that monitors your Squid configuration. It is a free and open source software which is capable of analyzing all web traffic in real time, and providing statistics and email alerts regarding the status of your cache. The core of Squid Monitor is Squid Monitor Server, which acts as a Squid proxy. It can be installed on an external machine running Linux or Windows, or on your own computer. However, server installation is required. You can also download the software for free. Once installed, you will be able to log into the Squid Monitor Server from your browser anywhere you are online. GTX-Tuner Server manages the log-in information to all the GPUs that are used in your system. It manages the login information and fixes the GPU bug. It works on Windows XP, Vista, 7, 8, and 10.
