Today, we'll see how to use Photoshop Elements, the features it contains, how to import and edit photos, how to change sizes, colors and apply brightness, compression, contrast and a lot more. Use

Photoshop Elements to Edit and Create Images The first step to edit and create images in Photoshop Elements is to open an image, select an option and make a backup. Open Photoshop Elements Open a new image From the File menu, select Open or Open Recent Photoshop Elements offers many options to open images: If you don't find your image, you can search for it in your documents, pictures and Google.

You can also load an image from another folder, a URL, a URL bookmarked on your desktop or a URL in an e-mail. Press the Shift key and select from the Open dialog box Use the Alt/Opt + F keys to search for your image Connect the J-Connector cable and upload your photos to Google Drive Change the brightness, contrast and color After opening your image, you can change its brightness, contrast and color using Adjust options. You can find them in the Adjust menu at the top-right corner of the screen: There are four adjustment methods: Fill

Light Levels Curves Brightness-Contrast Use Adjust to adjust brightness and contrast The Fill Light method gives a sense of depth in a photo. If you want to increase the brightness, use the Tint slider instead of the Fill Light slider to make the most of it. When you move the slider from right to left, the darker areas of your image are tinted. Contrast is an important option that helps enhance details and create the contrast between the light and dark tones of your image. You can move the Red or Blue slider to adjust the contrast. To make colors brighter or darker, you can use the Tint slider. As the contrast of your image decreases, your image looks more saturated and vivid.

Changing brightness and contrast on the image in Photoshop Elements With the Levels slider, you can increase or decrease the brightness of each color on the image. As you move the slider from left to right, the darker areas of your image get lighter and the lighter ones get darker.

Use the Tint slider to adjust colors. 388ed7b0c7
