A review of AutoCAD for Windows and macOS (desktop) A review of AutoCAD for Windows (desktop) AutoCAD for Windows and macOS (desktop) The most recent version of AutoCAD is version 2018, released in February 2018. Each release of AutoCAD is a major upgrade, and the new releases are usually approximately 1 year in duration. In contrast to other programs, AutoCAD is not a single program, but a collection of parts that share a common user interface (UI). AutoCAD 2018 continues this approach, being composed of different parts that share common tools. These parts are combined into the major views. Each part, such as the drawing and annotation parts, has its own configuration, as well as the tools (or functions) it offers. The configuration of these parts (views) is performed via the palette. The palette is a window with all the functions of a particular view. The main features of the palette are that it allows you to quickly access the most used commands, and that it can be resized, which can be very helpful for the performance of the CAD process. A quick way to find the palette for a certain tool (or function) is to press Ctrl + Alt + P (Windows) or Command + Shift + P (macOS). All the parts that compose the views are organized in tree structures (panels), which help in displaying all the active functions and functions that you can apply to the selected objects. In this sense, when the user selects an object, you will have the option of seeing all the functions that it may support, along with the main ones. To change the panels that appear when you select an object, you must go to the command menu, and select the panel you want to apply. On the right hand side of the screen, you will see the panels to which the selected object is assigned. In AutoCAD 2018, you can select objects by using the selections menu. In this way, you can select objects (2D or 3D) of the same type. In the 3D mode, you can select the objects with the same object type, including their references and attributes. This way, you can select the objects that you want to move, rotate, scale, etc. You can view all the operations made to the selected objects on the Overview

Lock and mark down annotations in a drawing. Let another user add to your annotation, simply lock it, and then the locked annotation disappears. When the user returns to the drawing, he or she finds the locked annotations. (video: 1:53 min.) Draw a line from one annotation to another and have it stick. You'll have two reference points to help you draw accurately. (video: 2:00 min.) Copy images directly to CAD (drawing) files, including bitmap, vector and raster images. (video: 3:26 min.) Import Excel tables. Use PivotTables to sort and manipulate data in Excel tables. Add Excel tables to drawings, update the data, and have it appear in your CAD drawings with no additional effort. (video: 4:10 min.) Create an automatically generated 3D terrain. Quickly create a 3D view that looks like a topographical map. (video: 6:30 min.) Create hyperlinks. Create custom hyperlinks from email to your drawings. You can even specify whether the hyperlink is an external or internal hyperlink. Hyperlinks can display web sites, provide a URL, open a document, or even call a function. (video: 4:06 min.) Automatically generate annotation packages. You can create an annotation package that contains all the annotations for a drawing. The annotation package is a single package that contains all the annotations for all the layers in a drawing. (video: 4:09 min.) Make in-depth corrections with the In-Place-Edit feature. Inspect a drawing, make changes and generate automatically update the drawing, all in the same tool window. (video: 6:11 min.) Implement the built-in structured layers. You can use the built-in structured layers as an alternative to using a partition or a block with layers. (video: 7:07 min.) Automatically create markers for common objects. Create markers for axis, lines, circles, polygons, and so on. You can select from a list of predefined markers or easily create your own. (video: 4:15 min.) Create chamfered walls. Draw walls that look more like real walls, such as having an inside and an outside chamfer. You can also specify a radius for the chamfer.
