Concetti Di Informatica E Fondamenti Di Java Java coverage can be specified as: Exam number or syllabus number.Q: Strange behaviour with mkvirtualenv I was using virtualenvwrapper in order to create and manage different python environments easily. Now, I tried to use mkvirtualenv for the same purpose. First of all, I understood that virtualenvwrapper is better than mkvirtualenv because the former one is able to create virtual environments for non-root users in a separate directory from the base environment. Besides, virtualenvwrapper uses pyenv in order to create the new environments while mkvirtualenv uses pyenv directly to create the new virtual environment. However, using mkvirtualenv I found that it creates the new environment by modifying the virtual environment of the base environment. I have a script that uses virtualenvwrapper in order to create and manage different environments. If I run that script from the base environment (not the newly created virtual environment) it works fine. However, if I run the same script from the newly created virtual environment I get: Traceback (most recent call last): File "test.py", line 5, in from
